

— **SCANJET**® — TANKCLEANING

SCANJET TANK CLEANING SYSTEMS

Scanjet produces a wide range of tank cleaning machines to match any industrial demand, for an efficient and environmentally friendly installation, with the most modern tank cleaning technology available.

A highly qualified design team assist in providing optimised technical specifications prior to installation, based on actual tank drawings, in order to provide a **specialised fabrication** in Scanjet own workshops.

Scanjets tank cleaning robots are suited for all kind of applications within most kinds of process industries. The product range covers applications from small barrels, IBC's up to large tanks/vessels containing thousands of cubic meters with product.

The use of **Scanjet high-impact tank cleaning robots** instead of traditional cleaning methods, such as manual fire-hose cleaning, static spray balls or cleaning with high-pressure lances, offers considerable savings in the general production cost.

After sales and service

Scanjet is a member of the **Saab Rosemount Group** and can thus provide the users with a skilled and efficient world-wide network of sales and service representatives.

Spare parts are produced in Scanjet own factory and are available within 24 hours service. There is also a test plant at the customer's service, with facilities for full scale testing of machines.

The entire range of Scanjet tank cleaning products for industrial applications:
